

# Universal Controller IC for the 2-Phase Stepping Motor Drive

## PMM8713PT

### Outline

The universal controller "PMM8713PT" is the gate array IC (HIC) to control the 2-phase stepping motor drive. This product has been developed for the purpose to further simplify 2-phase stepping motor use, as combined only with switching elements or power hybrid ICs to configure a 2-phase stepping motor driver.

### Characteristics

- Universal controller : The following 3 types of energization mode can be selected by switching at the energization mode switching terminal 1EX / 1-2EX / 2EX
- Source voltage : Vcc=4.5~5.5V
- High output current : 24mA MIN. (sink, source)
- High noise margin : Schmitt trigger circuit is incorporated for the all input terminals.
- 2 types of pulse input : 2 input mode (CW, CCW input mode)  
Pulse and direction mode (CK, U/D input mode)
- Excited status verification monitor : Outputs the monitor signal of the controller status.

# Input Pulse Monitor

## Example of Application Circuit (Bipolar wiring motor)

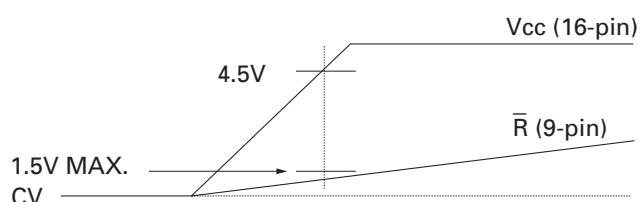

- Combined with the power hybrid IC

#### Energization mode setting

Pin No.	Terminal symbol	Input level	Motor operation
5,6	$E_A, E_B$	H	1-2EX
		L	2EX

- The normal initial reset may not be performed during unstable VCC after turning the power ON. For reliable resetting, hold the R terminal (9-pin) at the "L" level till the VCC becomes stable.

- Power hybrid IC: Refer to page 117 for the PMM2101 specifications.
  - Refer to the PMM8713PT Operation Manual for other application circuit examples.
